

A quick introduction to the **Econo+** platform

Exploring how it works,
its potential use cases & the
science behind the platform

The underlying premise of a civilized world is an interlinked resource network that powers it all.

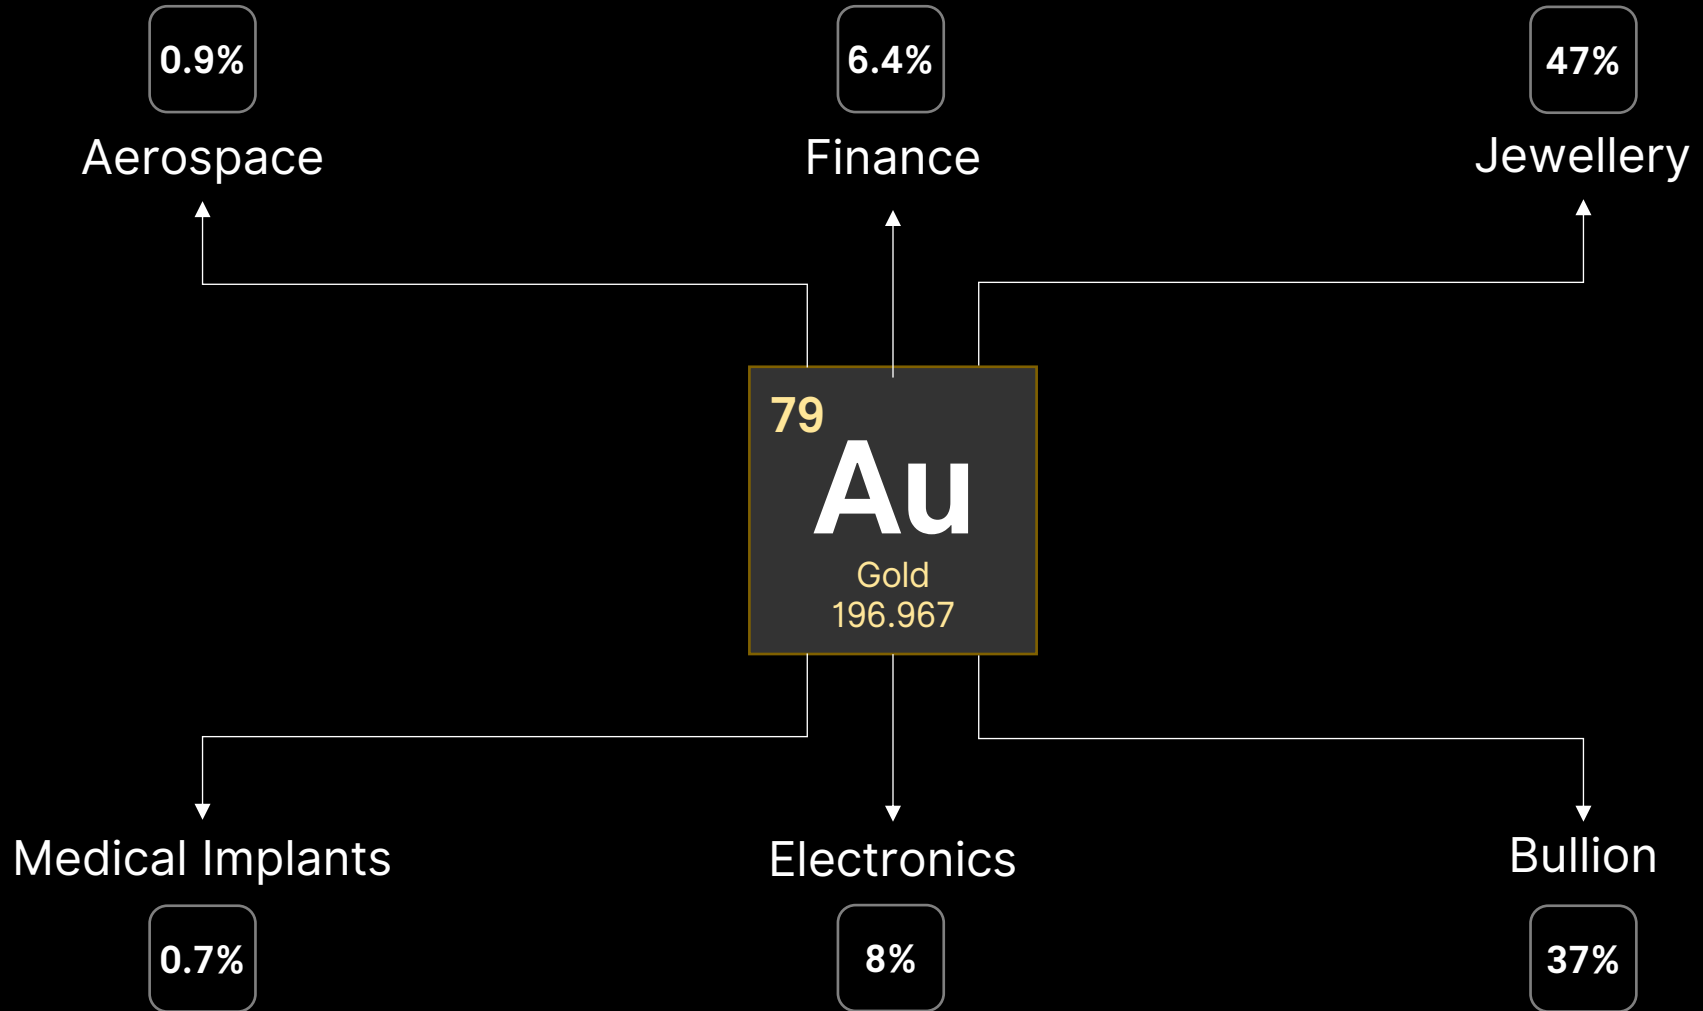

An aerial view of the Earth from space, showing the Western Hemisphere. The image is dark, with the Earth's surface appearing in shades of brown, green, and blue. The text is overlaid on the image.

We need to understand what powers it to
gain deeper insight into:

- Protecting our planet
- Maintaining a sustainable economy
- Maintaining the resource balance
- Grow our businesses
- Ensuring personal prosperity

...but ultimately, achieve the synergistic
co-habitation that we all **deserve**.

Let's see it in action.

The interlinkage of resources between 2 industries

Medical Industry

Many over-the-counter (OTC) drugs contains copper contents. It is also very common in x-ray machines due to its short-wavelength producing properties.

Typically administered as "gold salts" due to its properties of immunosuppression for treatment of arthritis-related diseases, also used in implants.

Its uses ranges from electrolytic forms used in IV drips to OTC medicines such as aspirin or laxatives. It's non-toxic and is naturally biocompatible in nature.

An important element in creating key components for medical devices such as pacemakers, implantable defibrillators, neuro-modulators as well as a variety of anti-cancer drugs like carboplatin.

Semiconductor Industry

Due to its highly conductive nature and lower electrical resistivity, copper has replaced aluminium as circuit interconnects used in many modern integrated circuits (IC).

Due to its excellent conductivity and non-corroding properties (electrical transparency), gold sees its uses as a "dopant" in IC manufacturing or as gold contacts.

Magnesium have very specific yet important uses in ICs, typically as an electrolytic semi-insulation element in fabrication and a future potential in optoelectronics.

It is a vital element in semiconductor photochemistry used in many III-V compound IC devices. Often as ohmic contacts, electrodes, and even electrical resistors.

Table Key

- **Limited**
by availability; future risk to supply
- **Threatened**
decreased availability due to increased usage
- **Danger**
severe availability shortage in the next 100 years

How it works?

Highly **integrated** datasets from **trusted** global NGOs & government authorities with scientific data from WolframAlpha®

CoreEngine
MegaData™

Trusted sources, correlated & organised, as well as rigorous data clean-up & sanitation to produce clean and highest quality data

How it works?

CoreEngine
MegaData™

**External A.I.
input sources**

i.e. OpenAI ChatGPT,
Bing Web Search API

*Hand-tuned integrated database
by Innovilage data science experts
and proprietary algorithms.*

- Rigorous S.O.P. followed by our experts to fine-tune data.
- Additional fact-checking to ensure data integrity.
- Scientific feeding of industry know-how to add relevance.
- Simulated data interpretation in Microsoft® Excel®.

The full Innovilage experience
centered around simplicity, clarity,
and usability.

Industry-tested UI/UX design to make the
most out of the available data.

Purpose built for no-nonsense signalling &
insight into potential market *inflation*, materials
availability and *supplies* for procurement, as
well as long-term *strategic* planning through
relevant information extraction relating to key
resource suppliers.
